Dear

FREEDOM OF INFORMATION – WOUND CARE

I write in response to your request for information in relation to wound care within NHS Lothian

Question:

- I have attached a word document which has been laid out for ease. It clearly identifies what information I would like to receive from this freedom of information request. By saving the attached word document file, it will allow you to fill in the boxes directly, alternatively, it can be printed off and filled in manually if that is easier.

Answer:

See enclosed documents as requested.

I hope the information provided helps with your request.

If you are unhappy with our response to your request, you do have the right to request us to review it. Your request should be made within 40 working days of receipt of this letter, and we will reply within 20 working days of receipt. If our decision is unchanged following a review and you remain dissatisfied with this, you then have the right to make a formal complaint to the Scottish Information Commissioner within 6 months of receipt of our review response. You can do this by using the Scottish Information Commissioner's Office online appeals service at www.itspublicknowledge.info/Appeal. If you remain dissatisfied with the Commissioner's response you then have the option to appeal to the Court of Session on a point of law.

If you require a review of our decision to be carried out, please write to the FOI Reviewer at the email address at the head of this letter. The review will be undertaken by a Reviewer who was not involved in the original decision-making process.

Headquarters
Mainpoint
102 West Port
Edinburgh EH3 9DN

Chair Professor John Connaghan CBE
Chief Executive Professor Caroline Hiscox
*Lothian NHS Board is the common
name of Lothian Health Board*

FOI responses (subject to redaction of personal information) may appear on NHS Lothian's Freedom of Information website at: <https://org.nhsllothian.scot/FOI/Pages/default.aspx>

Yours sincerely

ALISON MACDONALD
Executive Director, Nursing
Cc: Chief Executive

FOI Questions

Please complete all sections (1-5).

Each section is on a separate page to aid in completion by different departments if needed.

Trust Name: NHS Lothian- Tissue viability team
--

1. Trust data

Does the trust have a wound care clinic?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
If yes, which hospital/s in the trust are these located at?		
Are these clinic specific clinics?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
If yes, please list. e.g., Diabetic Foot Ulcer (DFU), Burns, acute surgical wounds etc.		

How many patients are seen for wound care p.a? 3751 referrals received into tissue viability service.
How many surgeries does the trust perform p.a?
What are your surgical infection rates p.a?

Have you completed a recent wound care audit?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>
If yes, please supply the date. This was carried out in one health and social care partnership in Lothian December 2022		
Could this please be attached?		
Alternatively, please direct to where this can be found?		

Are your wound care pathways publicly available?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
If yes, could this please be attached		
Alternatively, please direct to where this can be found? Held on internal intranet pages for TV.		

--

2. Health Care Professionals

Wound care HCP	Number Permanently Employed	Salary Band	How many temp/locum district nurses, TVN or HCA's have been employed over the last 12 months.
How many district nurses are employed in the trust?			
How many Tissue Viability Nurse (TVN) are employed by the trust?	12	Band 6,7 and 8a	none
How many community facing Health Care Assistants (HCA) are employed by the trust?			

3. Wound Care Products List

Please see attached extract from the pharmacy stock system on dressings purchased in the last full 12 months. We have noted on info tab detail of what is included in the extract as follows:

“FOI Number: 9844 - Wound Care - Question 3

FOI Request Details: Dressing Purchase Quantities

Date Range of Interest: March 2024 - February 2025 (please note date range was not specified on request, so we have done this for the last 12 months activity)

As our system is not set up in such a way to answer the question as posed, we have provided details of all purchases on our stock control system for dressings. This extract includes the drug description as we hold it locally, the packsize purchased, and the total quantities purchased both as full containers, and as dose units. The field "Dose_Unit_Description" has been included in order to delineate the measure of total quantity purchased as dose units, as our file set up is variable.

It is not possible for us to provide the manufacturer or the product as we purchase predominantly from wholesalers, rather than direct from the manufacturer, however, the DMD ID and DMD description currently mapped to each drug filed has been included for the requester to better identify this. Please note as we do not routinely utilise this field within our database, there are instances where this mapping has not been completed - because at time of file build it did not exist in the DMD extract, therefore has been included as an additional guide to allow the requestor to identify which product may be pertinent to the list they have provided.

Please also note that this data is from pharmacy stock system purchase only. There may be instances where these items have been purchased utilising our PECOS system and this team should be contacted separately to pull this information.

We have included within the extract all drug files with the drug form "Dressing", and all those within BNF category 13.02.02 (Barrier Preparations).”

This information should provide requestor with enough detail to transpose request into the format they wish.

The attached list contains the most relevant products, we do not anticipate all these being used in your trust, please fill in accordingly and return with this questionnaire.

The product list has been attached in an excel file (see below) to aid with ease of completion, however this can be printed off and scanned or written up separately with the relevant information if preferred, the list is also included (see end of document) to enable manual input.

4. Wound Care Products

How many Vacuum Assisted Closure (VAC) or Negative Pressure Device/System therapy pumps are owned/contracted e.g., these are not owned by the health board they are hired or ordered via NDC.

Please add numbers below:

Negative Pressure devices	
Manufacture name	Product name
Convatec	Avelle pump
Nexa Medical	NEXA NPWT Device
KCI MEDICAL	Nanova therapy unit
Smith & Nephew	Pico 7
Smith & Nephew	Pico 14
Creed Medical Ltd	UNO dressing kits
Other KCI Activac	
Other	
Other	

How much is the service contract amount per year?

unknown

How many of these are in repair/lost?

unknown

If known, what is the cost of repair if not under a service contract?

What was the price paid per unit for a VAC/NPD?

£132.50

What is your annual spend on consumables for the VAC/NPD?

£219,006.03

5. Trust Research and Development

How many wound related trials have you participated in over the last 5 years?

1

How many of those were commercially led trials?

1

How many of those were academic/internally led trials?

0

What is the average turnaround time for commercial R&D approval?

Once R&D are in receipt of a full document set and an NCVR approved budget we aim to sign contracts and issue local R&D approval within 30 days

Attachment - Wound Care Products List (Ref Q3)

NHS Lothian - Midlothian Primary Care Wound Audit.

Date: 01/10/2023

Authors: Professor Jenni MacDonald, Nurse Consultant, NHS Lothian

Carol Jeffrey, Tissue Viability Clinical Nurse Specialist Quality Improvement.

Background:

Within NHS Lothian, there is currently no measurement of wound numbers and wound management practices. In order to understand this in more detail an audit of all of the wounds within Midlothian was undertaken.

With no wound healing rates measurement in NHS Lothian, any improvement will not be demonstrable. A digital wound app that measure wound numbers, wound types and wound healing rates is in the planning stages. This secure app will be located on Community Nurses smart phones.

This audit included four District Nursing teams looking after housebound patients, nine Community Treatment and Assessment Centres (CTAC) teams located in Health Centres across Midlothian for ambulatory patients (Monday to Friday), four Hospital wards at Midlothian Community Hospital for in-patients and a pilot weekend clinic that took over the weekend care of CTAC patients requiring daily wound management.

Population sample:

Geographical area	Population
Midlothian population (2021 data)*	94, 680
Lothian total population (2021 data)*	916, 310
Midlothian population as a % of Lothian population	9.6%

**Data taken from National Records of Scotland*

Objectives:

To provide a general overview of wound care practice across an NHS Primary Care Health and Social Care Partnership, and the associated utilization of hospital and referral services.

To identify the numbers of patients with wounds, wound numbers (some patients had multiple wounds) and evaluate the type, duration and healing status of wounds being treated.

To highlight areas of practice which deviate from best practice.

To identify wounds which might benefit from targeted support by a pilot Tissue Viability wound clinic.

To evaluate the presence and management of wound infection.

To support targeted education and training in order to promote best practice or to standardise practice across a team or multiple teams.

Method:

NHS Lothian Sustainability and Value Investment Fund via the Health and Social Care Partnership Prescribing Forum funded a 12-month Tissue Viability Quality Improvement post within Midlothian. This post commenced in June 2022 and its outcomes included:

- Identifying ongoing opportunities for improvement work, particularly with a view to optimising health gain for patients
- Assist in the development and implementation of a strategy to reduce NHS Lothian's spend on wound dressings
- Improving the quality of documented diagnosis and healing rates
- Reviewing and reducing silver and superabsorbent dressing use through improving diagnoses and treatment rates

The wound audit was undertaken by nursing teams and clinicians involved in wound management in all of the Primary Care areas across Midlothian for one week from Monday 5th December to Sunday 11th December 2022.

The Tissue Viability Team developed an electronic template, in the form of an Excel spreadsheet (Table 1). The template was tested and then disseminated to all of the included areas. One entry was required per wound care contact.

Staff training was provided on how to complete the audit and support was offered and provided as requested. One audit tool per clinician was sent out to document their wound care contacts.

Table 1: Electronic wound audit template

Date	Free text box
CHI (unique patient identification number)	Free text box
Sex	Drop down menu: Male, Female
Wound type: If leg ulcer specify type: venous/arterial /other/not known If other or not known please document in "other information" box e.g. Pyoderma	Drop down menu: Abscess Burn Diabetic foot ulcer Extravasation, Fungating Haematoma Leg ulcer – venous Leg ulcer – arterial Leg ulcer – other Lymphoedema Moisture lesion Pressure ulcer Self-harm Surgical wound Traumatic i.e. skin tear Other – please state
Anatomical location of wound:	Free text box

If the wound was identified as a leg ulcer Doppler ABPI date was requested, or staff were asked to specify why it had not been undertaken.	Free text box
If the wound was identified as a leg ulcer type of compression applied was requested	Drop down menu: Full compression bandaging Reduced compression bandaging Compression hosiery Lymphoedema Wraps/Garments No compression
Date wound first developed	Free text box
Frequency of dressing changes per week	Free text box
Time taken to undertake wound management and documentation/other tasks related to the wound e.g. prescribing. Not including travel.	Free text box
Stage of wound infection as per Healthcare Improvement Scotland Ropper Ladder for Infected Wounds (see Appendix 1)	Drop down menu: Stage1 Stage 2 Stage 3 Stage 4 Not known
Is an antimicrobial dressing/product or antibiotic being used at present? If yes, please state which.	Free text box
Date of last wound photography if any	Free text box
Number of hospital admissions in the last 12 months related to their wound e.g. cellulitis	Drop down menu: None 1 2 3 4 Not known
Is the wound healing, deteriorating, static or not known?	Drop down menu: Healing Static Deteriorating Not known.
Tissue Viability referrals in the last 12 months?	Drop down menu: None 1 2 3 4 More than 4 times Not known.
Other information (use this box if required)	Free text box

The Quality Improvement Tissue Viability Nurse and Tissue Viability Administrator supported data collection extensively. Wounds with missing data were investigated by reviewing electronic documentation and discussion with primary care givers. Where possible missing data obtained was added to the audit data. Data was collated into one master spreadsheet and analysed.

Wound Audit Results

Wound numbers per sex:

Table 2: Wound numbers/sex

No of wounds	342 *5 documented as bilateral but included as one wound
No of patients	274 *some patients had more than one wound
No of Males	132
No of Females	141

*Three incorrect Chi numbers made it unable to identify those patients. One patient had no Chi number therefore unable to determine sex.

Analysis:

Analysis: In total 274 people had 342 wounds (some patients had two or more wounds). Marginally more women than men had wounds.

Types of wounds:

Table 3: Wound types and numbers

Type of wound	Number of wounds = 342	Wound type %'s of total wounds
Leg ulcer including: leg ulcer n =24 leg ulcer other n =31 venous leg ulcer n =40 arterial leg ulcer n =1	96	28%
Surgical wound	63	18%
Traumatic wound/skin tear	54	16%
Pressure ulcer	40	12%
Other wound	32	9%
Diabetic foot ulcer	21	6%
Lymphoedema/chronic oedema	17	5%
Abscess	12	4%
Moisture lesion	3	1%
Burns	3	1%
Self-harm wound	1	0.3%

Analysis:

Not all wound types fit in to the audit categories, so wound type - other was an option. 32 – “wound type – other” were documented. Unfortunately, only 1 wound was given a differential diagnosis, the remaining 31 “wound type – other” were identified only by their anatomical location. This suggests that staff are not always confident in diagnosing wound type.

Five of the lymphoedema wounds were documented as one wound but were identified as bilateral (on both legs).

No haematomas, extravasation or fungating wounds.

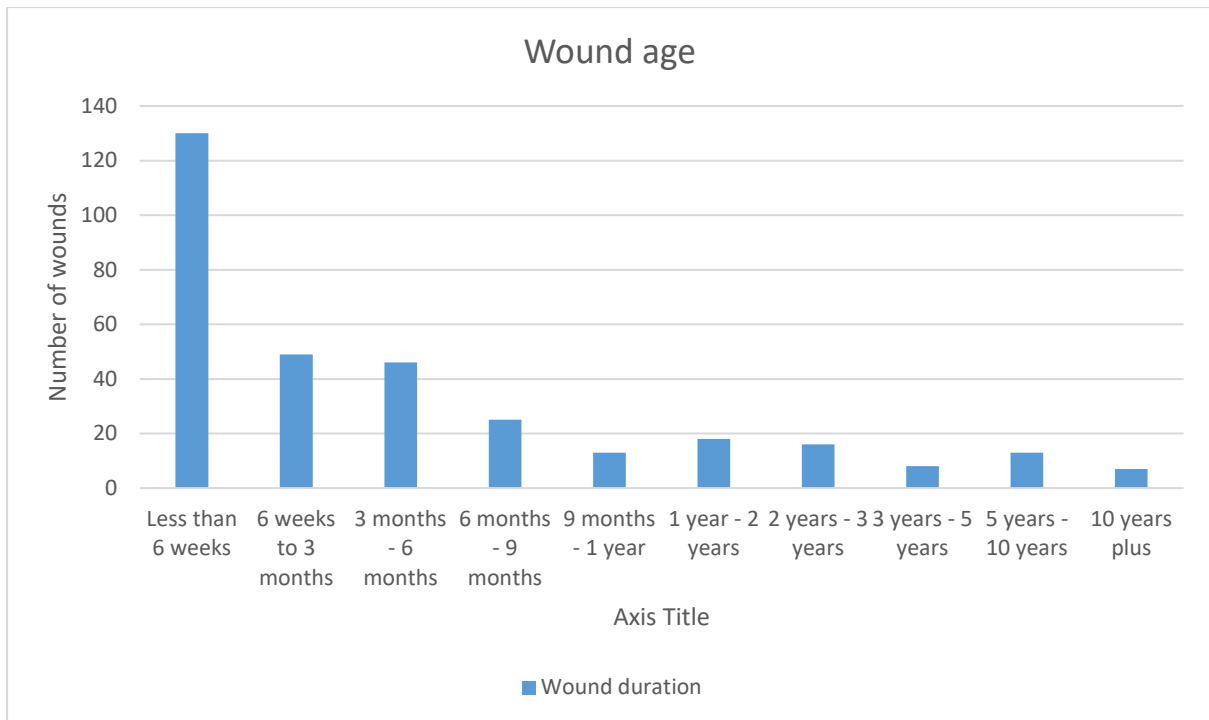

The highest percentage of wound type was lower limb ulcer with 96 (28%) of all wounds.

Age of wounds:

Table 4: Wound age

Wounding date	(month averaged as 30 days)
Less than 6 weeks (1 – 42 days)	130
6 weeks to 3 months (43 to 90 days)	49
3 months – 6 months (91 to 180 days)	46
6 months – 9 months (181 to 270 days)	25
9 months to 1 year (271 to 365 days)	13
1 year to 2 years (365 – 730 days)	18
2 years to 3 years (731 – 1095)	16
3 years to 5 years (1096 – 1825 days)	8
5 years to 10 years (1826 – 3650 days)	13
10 years plus (3651 days plus)	7
Range	1 day to 6,372 days
How many without a wounding date * from original data (suggests that primary care givers do not know how old the wound is)	139 (approximate dates or unknown)
Number of wounds unable to identify how old they were	6
Comments	“many years” “comes and goes” “approximately 15 years”
Data discrepancies’	3 incorrect Chi numbers

Diagram 1: Wound age

The age of 139 (41%) wounds was left blank or approximated. This data was identified by reading the patients notes.

Wound duration ranged from 1 day to 6,372 days.

62 wounds (19%) were more than one year old.

28 wounds (8%) were more than 3 years old.

20 wounds ((6%) were more than 5 years old.

7 wounds (2%) were more than 10 years old.

Analysis:

Documentation of wound age was poor, with only 59% of wounds age known/documented. Primary care givers do not always know how old the wounds they manage are. Causes of this may include:

- Patients being transferred from other areas with documentation re wounding date not handed over
- Capacity/time demands not allowing time to search documentation
- Poorly completed assessment documentation.

There is an expectation that some wounds should be managed rather than aiming for healing. Although not all wounds can be healed due to complex factors affecting healing, many wounds that could heal are not being provided the optimal treatment leading the wounds to becoming chronic, which then makes them harder to heal.

Location of wound management contacts:

Table 5: Wound contact location and numbers

Location of wound management	Number of wounds	Number of patients seen*
District Nursing Team	158	115
CTAC/Treatment Room	160	144
Community Hospital Ward	23	14
Weekend Wound Clinic	1	2

*many patients have multiple wounds

Analysis:

The majority of wound management is distributed evenly between District Nursing teams and CTAC bases with 7% undertaken in the Community Hospital.

Wound contact episodes per week:

Table 3: Weekly wound contact episodes

Frequency of wound care contacts	How many wounds
Daily	22 x 7 = 154
Four times weekly	1 x 4 = 4
Three times weekly	44 x 3 = 132
Twice weekly	148 x 2 = 296
Weekly	126 x 1 = 126
Total number of wound care contacts in the audit week	712 wounds dressed per week *1 patient no frequency documented

Results:

Approximately 712 wound care contacts took place across Midlothian on the audit week, with the majority of wound management contacts shared evenly between District Nursing teams and CTACs.

Lower limb data:

Lower limb wound data was extrapolated from the audit data. This included leg ulcer, leg ulcer other, venous leg ulcer, arterial leg ulcer, lymphoedema/chronic oedema, other wounds (lower limb) with wounding date more than 14 days old and skin tears on the lower limb older than 2 weeks old.

Exclusions: Diabetic foot ulcers and wounds below the malleolus were not included.

Type of lower limb wound	Duration of wound in days (wounding date to first day of audit)	ABPI performed	Compression

Total number of lower limb wounds = 114	Total days with leg ulcer = 72,262 Average lower limb wound age= 686 days +	ABPI performed (no time frame defined) = 38 (33%)	Numbers in compression = 46 (32%) Full compression/ bandaging= 14

	(1 documented as many years omitted from calculation)		Compression hosiery = 14 Lymphoedema wraps/garments = 13 Reduced compression = 6 No compression = 42 Blank = 25
--	---	--	---

Results:

The audit data identified 114 lower limb wounds (33% of all wounds).

Total days with leg ulcer = 72,262

Average lower limb wound age= 686 days +

33% of lower limb wounds are documented as having a Doppler ABPI performed.

32% of the lower limb wounds were documented as receiving compression therapy.

Types of lower limb wound without a differential diagnosis (or with an incorrect differential diagnosis of skin tear) incorporate:

Leg ulcer (24)

Leg ulcer other (31)

Skin tears specifically on the lower limb, above or on the ankle, older than 2 weeks old (15)

Other wounds specifically on the lower limb, above or on the ankle, older than 2 weeks old (3) = 73.

64% of lower limb wounds do not have a correct differential diagnosis or a differential diagnosis at all.

Analysis:

In order to provide a differential diagnosis and commence the correct treatment all lower limb ulcers should have a Doppler ABPI performed. Only 33% of the lower limb ulcers documented that a Doppler ABPI had been performed.

The main type of lower limb ulceration is venous ulceration, caused by poor venous circulation, which can affect up to 3% of the adult population (Guest et al, 2017). Compression therapy is the main treatment. Only 46 (32%) of lower limb ulcers were in compression.

Chronic conditions such as lymphoedema and venous disease can lead to long term issues requiring extended care due to best practice treatment often not being implemented due to multiple factors including:

- Staffing levels for assessment
- High turnover of staff causing lower skill levels within teams
- Lack of specialist clinics for lower limb ulcer management
- Patient treatment tolerance issues
- Timely accessibility of compression products

This all leads to high numbers of unhealed wounds causing patient harm, unnecessarily high staff workloads and significant cost to the organisation.

Research has identified that wound care clinics have higher healing rates, especially for lower limb wounds. SIGN 120 (2010) recommended lower limb clinics for venous leg ulcer management, but this model of care has not been adopted in NHS Lothian. More recently, NHS Scotland Centre for Sustainable Delivery Modernising Patient Pathways developed the Venous Leg Ulcer Pathway, which also recommended Community Venous Leg Ulcer clinics.

As part of the Tissue Viability Quality Improvement post a small-scale complex wound clinic is being piloted in Midlothian, by the Tissue Viability Quality Improvement Nurse in order to provide targeted tissue viability support to a small number of people with chronic wounds identified by the audit. This began in August 2022 based in Bonnyrigg Health Centre. There has been some improvement and healing of wounds, although it was only possible to support small numbers of patients due to the Health Centre in which the clinic was based being closed for health and safety reasons. Patients were seen at other locations around Midlothian. A report regarding the clinic will follow.

In addition to lower limb ulcers data above, 12 lower limb wounds were identified as being caused by lymphoedema/chronic oedema.

Table 8: Lymphoedema/chronic oedema associated wound age, Doppler and compression data

Type of lower limb wound	Duration of wound in days (wounding date to first day of audit)	ABPI performed	Compression
Lymphoedema/Chronic oedema (12) *5 documented as one wound contact but identified as bilateral. For the purpose of this audit these will be counted as one wound	Years ago *	14/9/22	Lymphoedema wraps/garments
	Approximately 15 years * Estimated at 5,475	Blank	Compression hosiery
	1647 *	Blank	Blank
	1007	Not known	Lymphoedema wraps/garments
	1006	Not known	Lymphoedema wraps/garments

	576 *	Blank	Lymphoedema wraps/garments
	496*	Blank	Lymphoedema wraps/garments
	375	June 2022	Compression hosiery
	132	Sept '22	Full compression bandaging
	132	Sept '22	Full compression bandaging
	59	November '22	Reduced compression
	18	Blank	Compression hosiery

Analysis: Lymphoedema is a chronic condition, which is challenging to manage. There is currently no Lymphoedema service funded for housebound patients, although these patients are seen at the discretion of the Lymphoedema team. Poorly managed Lymphoedema through staff inexperience, delay in referral or lack of patient tolerance of treatment can cause significantly high workloads for Primary Care staff, in particular the District Nursing teams.

Wound Infection Level:

Table 9: Wound infection level – antimicrobial usage

Stage of infection	Number	Is an antimicrobial dressing/product or antibiotic being used at present
Stage 1 (low level colonisation)	123	4 Aquacel Extra 7 Aquacel Ag Aquacel Ag Extra USC cloth 4 Actilite 3 Flaminal Forte 3 Iodaflex Iodasorb Wound gel X 8 Prontosan soak 2 Urgotulle Flamazine Antibiotics
Stage 2 (high level colonisation)	32	Trimovate 6 Aquacel Ag Plus 2 Cutimed Sorbact Flucoxacillin 4 Prontosan Ag dressing + PO ABx Intrasite gel Aquacel 4 Actilite Oral antibiotics

		Actilite and Flucloxacillin Medihoney + PO ABx
Stage 3 (localised infection)	22	2 Prontosan, Aquacel Ag 3 Aquacel Extra Commenced on antibiotics 8 Antibiotics Aquacel Ag Aquacel Ag and Antibiotics Iodaflex and Antibiotics Flaminal Forte and Antibiotics
Stage 4 (spreading infection)	3	2 Prontosan, Aquacel Ag Antibiotics
Not Known	28	Yes 26 No Prontosan + Amoxiclav
Blank	134	Ag dressing 64 No 24 Blank 20 Prontosan 2 Prontosan/Flaminal Hydro Inadine Iodaflex Prontosan/TerraCortril Prontosan soak/UCS cloth Co-amoxiclav Ag dressing 3 Flaminal Forte Prontosan + Actilite Prontosan +Co-amoxiclav Prophylactic ABs post op Prontosan, Flaminal Hydro + Flucloxacillin

Results:

Audit results show that 134 “wound infection level” were left blank and 28 wounds infection level was documented as “not known”. This indicates a lack of knowledge of wound infection levels.

The audit identified that antimicrobial wounds products are not always being used correctly, appropriate for the level of infection.

Analysis:

Healthcare Improvement Scottish Ropper Ladder for Infected Wounds (Appendix 1) is available to guide practitioners to identify levels of wound infection and the appropriate usage of topical antimicrobial wound products and /or systemic antibiotics.

Training re wound infection is provided by the Tissue Viability team and is available to book.

Underuse of topical antimicrobial wound management products can lead to the unnecessary use of use of antibiotic therapy. Overuse increases financial cost to the organisation and is a contributory factor in antimicrobial resistance. There is currently no antimicrobial stewardship in place in NHS Lothian for either antimicrobial wound management products or systemic antibiotics used for wound infection.

Since this audit took place an NHS Lothian Biofilm Pathway (Appendix 2) has been launched to support practitioners with management of wound biofilms, which will reduce wound colonisation/infection levels and optimise efficacy of topical antimicrobial wound products. This was implemented with online training sessions available in July and August 2023 by the Tissue Viability team and additional intensive training provided for Midlothian teams by the Tissue Viability Quality Improvement Nurse.

Lessons Learned:

Discrepancies in the initial functioning of the audit tool, which required technical support to allow data entry.

Staff workload across localities was very high at the time of the audit leading to significant delay in returned data.

Not all staff were able to enter and return data on Excel spreadsheets and required support.

Summary of Evaluation:

342 wounds being managed by NHS staff identified in Midlothian = 0.35% of the population. If this were extrapolated across the whole of NHS Lothian, this would suggest approximately 3,207 wounds being managed.

From Midlothian data 688 wound contacts per week take place. Across Lothian, this suggests that 7,166 contacts could take place weekly (excluding secondary care and Care/Nursing Homes).

A high percentage of wounds do not have a correct differential diagnosis, which leads to inappropriate management and reduction in wound healing rates.

Wound age is under-documented. This leads to insufficient timely referrals to other specialities, reducing healing rates. 19% of wounds are more than one year old, 8% more than 3 years old, 6% more than 5 years old and 2% more than 10 years old.

Best practice assessment and management of lower limb ulceration is not always taking place, detrimentally affecting healing rates. Leg ulcer assessment and management education is available and a Referral Pathway is in place to guide appropriate referrals for lower limb wounds, but there is currently no NHS Lothian

Leg Ulcer Policy. This is in development as is an Immediate Care Pathway for lower limb wounds to support early intervention reflecting new best practice.

Timely access to compression hosiery to support prompt treatment of lower limb ulceration is another factor in lower healing rates. Work is underway developing an NHS Lothian Lower Limb Compression Formulary to support this.

Services do not include Leg Ulcer clinics. Clinical evidence demonstrates that specialist lower limb clinics deliver higher healing rates and recommendations for them have formed part of National Guidance since 2010.

Wound infection identification and treatment requires support. Tools and education are already in place to support this. Further audit to identify why this is the case may be required.

Antimicrobial stewardship processes relating to wound infection require reviewing.

This audit identifies that unhealed wounds are leading to unnecessary patient harm, excess workload for NHS staff and significant cost to the organisation.

Conclusion:

The audit has highlighted areas for consideration including wound clinic implementation and implementation of a digital app to support diagnosis, wound healing measurement and referral to specialists.

Areas for further exploration include:

Adherence with best practice specifically for lower limb ulcer assessment and management criteria including wounding date, assessment date, diagnosis, referral dates, and time to commencement of treatment.

Wound infection identification, validation of infection level and review of appropriate usage of antimicrobial wound management products.

It is anticipated that a digital wound app will support further data collection.

Appendix 2

Scottish Ropper Ladder for Infected Wounds Guidelines for identifying infected wounds and when to start and stop using topical Antimicrobial Wound Dressings (AWD)

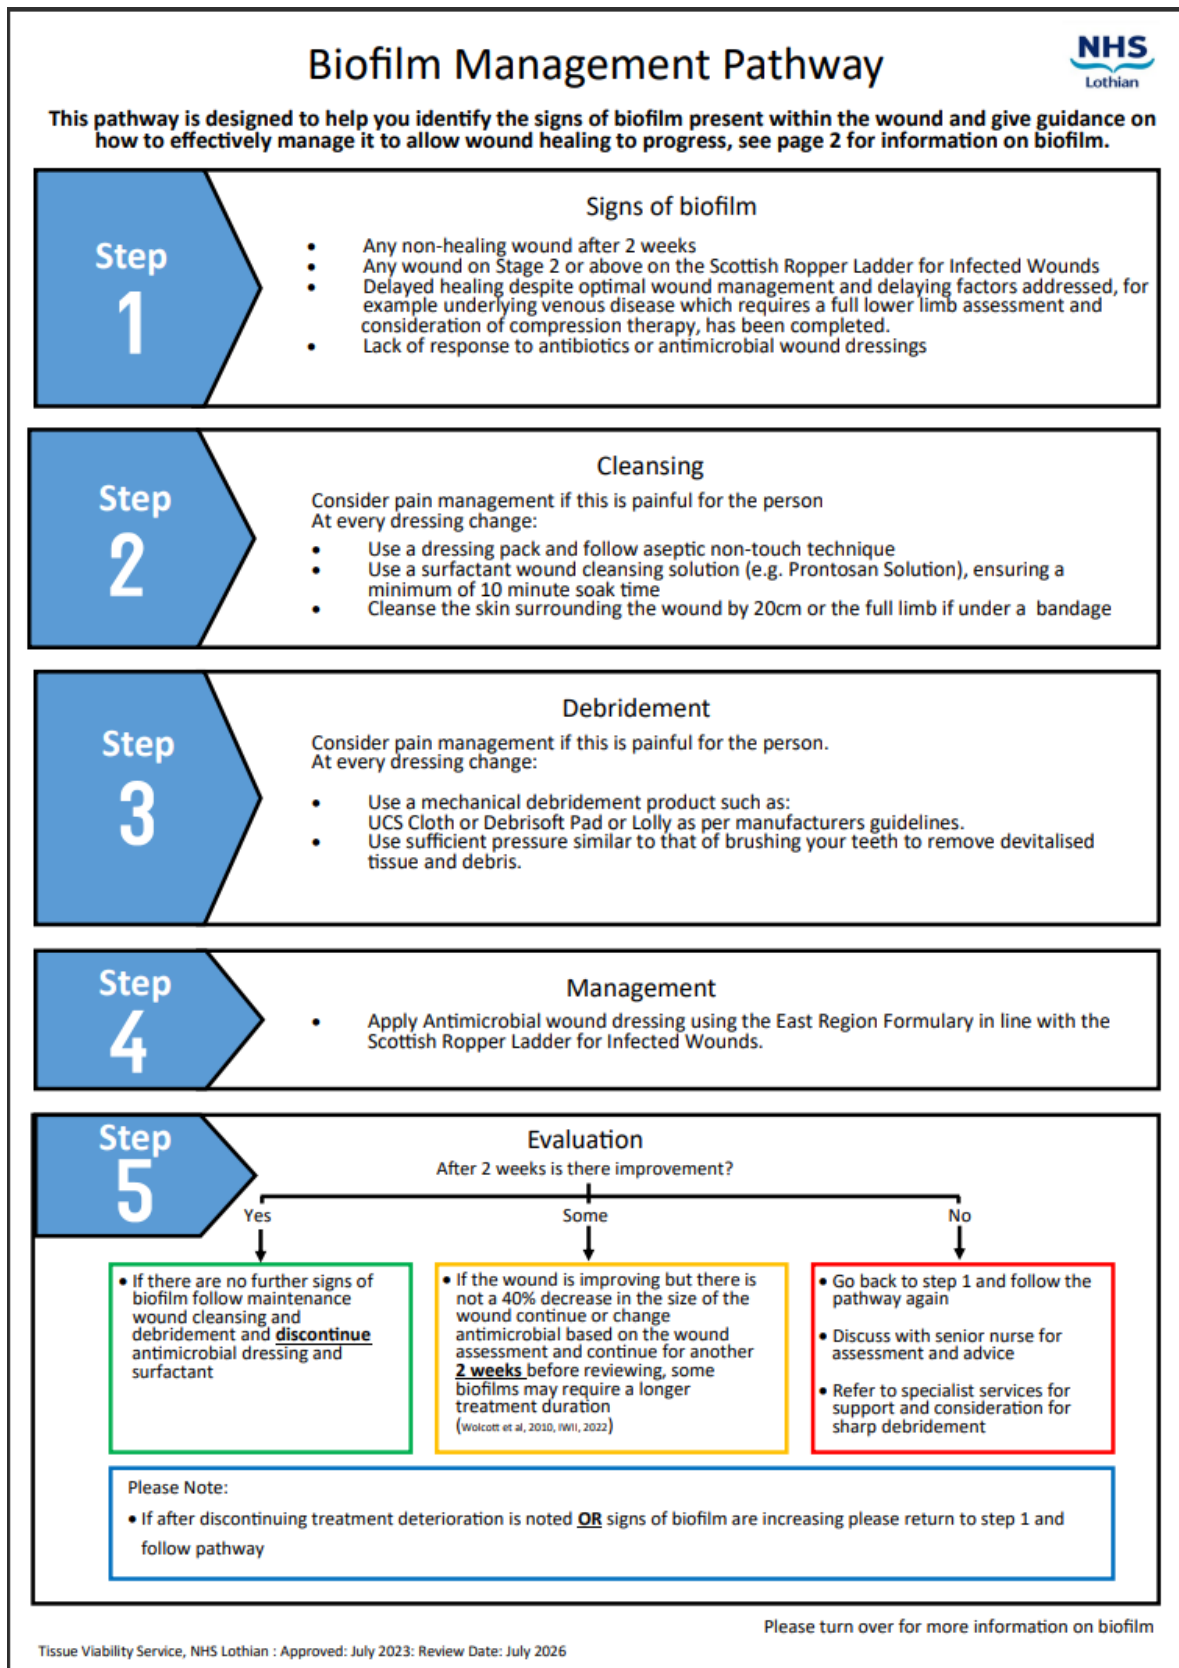

In certain patients, some signs and symptoms of infection might be masked e.g. diabetes, vascular, immunocompromised. Clinical judgement should be used to determine when AWDs should be used.

Appendix 2

Biofilm Management Pathway

What are biofilms?

- A biofilm is a community of micro-organisms that attach to a surface by creating a sticky substance called extracellular polymeric substance (EPS) which surrounds and protects the bacteria
- A biofilm can be made up of a single species or a mixture of species
- A mature biofilm can develop in as little as 24-48 hours after which it will disperse bacteria into the air to land in other areas of the wound bed or surrounding skin (Pinto et al, 2020)

How Biofilm Develops, Pinto et al, 2020

This might be the first time you've heard the term biofilm, but they're actually all around us even on our teeth! We brush twice a day to manage the biofilm on our teeth and need a similar consistent approach to wound biofilm.

How does biofilm affect wound healing?

- Biofilm are an important cause of delayed healing in wounds, they are thought to delay wound healing by creating an inflammatory response in the wound bed and surrounding tissues which does not allow healing to progress through the normal steps
- There is increasing evidence that biofilm are present in most, if not all, chronic, non-healing wounds (IWII, 2023)

How do I know there is a biofilm in the wound?

- There is currently no diagnostic test for wound biofilm, swabbing can be incorrect due to the way that biofilm grows in small pockets rather than laterally across a wound bed
- It is not possible to make a diagnosis of wound biofilm by eye
- The determination that a wound is not healing because of biofilm is based on eliminating other possible causes of non-healing by identifying underlying causes and ensuring that the patient is optimised and receiving the correct wound management (IWII, 2023)

How do I manage a biofilm in a wound?

- See the pathway overleaf for a step by step guide
- Literature says that wound cleansing and debridement should be done consistently and regularly to disrupt a biofilm and best practice is a 4 step technique of cleansing, debriding, management of wound edges and appropriate dressing selection (Murphy et al, 2022; BBraun, 2021; Choudhury and Downie, 2022)
