Dear

FREEDOM OF INFORMATION - ADHD

I write in response to your request for information in relation to ADHD assessments.

Question:

- Please can you provide a full list of all of the GP Practices in Edinburgh that support the Shared Care Agreement for the treatment and administration of ADHD medicines through the NHS following an ADHD assessment that is funded privately?

Answer:

The majority of this information would need to be requested directly from the GP Practices as they are independent contractors. As per section 17 of the Freedom of Information (Scotland) Act 2002 I must formally advise that NHS Lothian do not hold this information.

In relation the 2c practices run by NHS Lothian - all practices work to the enclosed Shared Care Agreement, and deal with all requests as per the attached LMC guidance. Under this guidance, unless a patient has been diagnosed with ADHD by the NHS or an affiliated service, GP practices will not issue medication.

I hope the information provided helps with your request. I am sorry I cannot help with your request.

If you are unhappy with our response to your request, you do have the right to request us to review it. Your request should be made within 40 working days of receipt of this letter, and we will reply within 20 working days of receipt. If our decision is unchanged following a review and you remain dissatisfied with this, you then have the right to make a formal complaint to the Scottish Information Commissioner within 6 months of receipt of our review response. You can do this by using the Scottish Information Commissioner's Office online appeals service at www.itspublicknowledge.info/Appeal. If you remain dissatisfied with the Commissioner's response you then have the option to appeal to the Court of Session on a point of law.

Headquarters
Mainpoint

SHARED CARE AGREEMENT

Name of medicine methylphenidate

Indication for attention deficit hyperactivity disorder (ADHD)
in adults and children aged 6 years and older

Version: **3.0**

Approval date: **December 2021**

Review date: **December 2024**

The Shared Care Agreement (SCA) is intended to facilitate the accessibility and safe prescribing of complex treatments across the secondary/primary care interface. It does not contain all of the relevant product information, which should be sought using the current British National Formulary and manufacturer's Summary of Product Characteristics. The SCA must be used in conjunction with the NHS Lothian Procedure for the Shared Care of Medicines, available [here](#).

Roles and Responsibilities

Listed below are specific responsibilities that are additional to those included in the NHS Lothian Procedures for Shared Care. Please refer to the [procedure](#) for core roles and responsibilities that apply to all Shared Care Agreements.

Consultant

- Adults: co-ordinate the assessment and diagnosis of adult patients.
 - Mental health services will verify the diagnosis of patients from overseas; these patients should provide suitable correspondence from the previous medical providers.
 - The appropriate documentation should also be provided for patients diagnosed privately or in another Health Board area.
 - In some cases it may be necessary for mental health services to repeat assessments.
- Initiation and supply of immediate release methylphenidate until patient's treatment is stable and for one further month, including conversion to modified release preparation when appropriate.
- Informing patient of the 'off label' use of methylphenidate.
- Patient monitoring (see also 'Monitoring' below)
 - Children – height, weight, pulse, BP at baseline, 3 monthly, then 6 monthly in the longer term. All monitoring will be undertaken by CAMHS.
 - Adults – height, weight and family history of cardiovascular disease at baseline and refer patient for ECG if required; monitor BP and pulse during dose titration – 6 monthly monitoring by GP thereafter. Re-evaluation of continued need for methylphenidate treatment beyond one year.
- If methylphenidate is continued beyond 18 years of age, the responsible CAMHS consultant will arrange for care to be transferred to Adult Mental Health Services as appropriate.
- Discontinuation - advising the GP when methylphenidate should be discontinued. The specialist will provide the necessary supervision and support during this period. Be aware that abrupt discontinuation can precipitate withdrawal.

General Practitioner

- Prescribe modified release methylphenidate preparations by brand as advised by the specialist team because the pharmacokinetic profiles of the brands differ.
- For adults: Monitoring of weight, pulse and blood pressure every 6 months.

Patient, Relatives, Carers

- As listed in NHS Lothian Procedures for the Shared Care of Medicines

Support and Advice for the GP

West Lothian Outpatients		01506 523770

Clinical Pharmacy Service, Royal Edinburgh Hospital: 0131 537 6842 / 6823 / 6372

Key information on the medicine

Please refer to the current edition of the British National Formulary (BNF), available at www.bnf.org, and Summary of Product Characteristics (SPC), available at www.medicines.org.uk for detailed product and prescribing information and specific guidance.

Background to disease and use of drug for the given indication

Attention deficit hyperactivity disorder (ADHD) is diagnosed if the three clinical features - inattention, over-activity and impulsiveness - have been present from an early age, persist in more than one situation (e.g. at home and in school) and impair function.

In children, the diagnosis must be made following a comprehensive assessment by an appropriate child psychiatrist and/or a paediatrician with special interest and training in this field. A diagnosis in adults must be made following a comprehensive assessment by a psychiatrist.

The assessment and management of this condition has been reviewed [NICE Clinical Guideline \(NG 87\), September 2019](#). NICE recognises drug treatment of ADHD as part of a comprehensive treatment programme addressing psychological, behavioural and educational or occupational needs.

Patients are usually transferred from CAMHS to adult mental health services at the age of 18 years.

Indication

Methylphenidate is indicated for the treatment of ADHD as part of a comprehensive treatment programme when remedial measures alone prove insufficient. For adults, treatment must be initiated under the supervision of a psychiatrist, and for children, a child psychiatrist and / or paediatrician with special interest and training in this field.

Methylphenidate is licensed for use in:

- children aged six years and over (this SCA therefore applies to children aged six years and over)
- adults who are continuing treatment commenced in childhood or adolescence

Although methylphenidate is not licensed in newly diagnosed adults, clinical evidence supports its use in this patient group. It is currently listed in the [Lothian Joint Formulary](#) (LJF) as first choice treatment for ADHD in adults and children.

Preparations

- Modified release methylphenidate preparations must be prescribed by brand as advised by the specialist team. The pharmacokinetic profiles of the brands differ; a specific modified release formulation will be chosen to suit the symptoms and lifestyle of the individual patient. The specialist team may switch from one preparation to another.
- The preferred brand of methylphenidate modified-release tablets 18mg, 27mg 36mg, 54mg is Xaggitin XL®.
- Immediate release methylphenidate preparations offer the advantage of flexible dosing. These products are less expensive than the modified release preparations and are used in preference when acceptable to the patient.
- Combinations of modified release and immediate release preparations may be prescribed on the advice of a specialist. For example, where the effects of the modified release preparation wear off and a “top up” dose is required in the evening.

Dosage and Administration

Refer to current Summary of Product Characteristics (SPC): www.medicines.org.uk and prescribing notes in [LJF](#)

Monitoring (adult)

For adults, weight, pulse and blood pressure are to be monitored by the GP every six months.

- If abnormal, recheck within 2 weeks. If still abnormal discuss with the psychiatrist.
- If pulse or blood pressure is severely abnormal, stop methylphenidate and inform the psychiatrist immediately.
- These results will be reviewed by the specialist during patient reviews and the psychiatrist will liaise with the GP about any changes, further investigations or specialist referral required.

Monitoring (child under 18 years)

For children, all monitoring will be carried out by the specialist CAMHS teams.

- Monitoring will be carried out at initiation, 3 monthly, then 6 monthly in the longer term.
- Monitoring will include measurement of height and use of developmental norms for growth, weight and centiles for pulse and blood pressure.
- Any findings that are out with the expected range for age will be investigated further including more frequent monitoring and if necessary referral to another specialist.

Contraindications - Refer to current Summary of Product Characteristics (SPC): www.medicines.org.uk

Cautions - Refer to current Summary of Product Characteristics (SPC): www.medicines.org.uk

Adverse effects - Refer to current Summary of Product Characteristics (SPC): www.medicines.org.uk

Drug interactions - Refer to current Summary of Product Characteristics (SPC): www.medicines.org.uk

The presence of this SCA does not compel a GP to prescribe if they feel that it is out with the scope of their competencies (as per GMC guidance on safe prescribing) or resources, as ultimate responsibility lies with the prescribing, not the recommending, clinician.

Approved for use by the:

General Practice Prescribing Committee on 7th December 2021
REAS Drug and Therapeutics Committee on 8th December

ADULT ADHD GP Pathway Edinburgh

Based on guidance from the Scottish Government and the LMC this is to provide clarity for GPs and their patients about the current referral pathways and provision of medication for patients with ADHD currently in NHS Lothian.

This Guidance is subject to change and last updated November 2024

1. **POSSIBLE ADHD DIAGNOSIS:**

Patients who wish referral to the Community Mental Health Team (CMHT) to explore a diagnosis of ADHD can be referred by their GP if appropriate and would join the waiting list if the referral is accepted.

Please note the community mental health team are currently only seeing urgent referrals so referrals for ADHD are waiting many years for an appointment (this has recently been estimated as approximately 17 years).

2. **PRIVATE DIAGNOSIS MADE IN UK AND NOT ON MEDICATION:**

Patients who have had a diagnosis after a Private Assessment (in the UK) and are **NOT** on medication but wish an NHS follow up or consideration of medication can be referred to CMHT and would join the waiting list as above if accepted. The documents from the Private Provider must be sent with the referral. This includes diagnoses made by Clinical or Educational Psychologists.

3. **PRIVATE DIAGNOSIS MADE IN UK AND STABLE ON MEDICATION:**

Patients who have a diagnosis after a Private Assessment (in the UK) and are stable **ON** medication which has been started privately but wish ongoing NHS treatment and follow up can be referred to CMHT as above. The documents from the Private Provider must be sent with the referral. This includes diagnoses made by Clinical or Educational Psychologists.

No medication can be issued until CMHT have assessed the patient.

4. **OVERSEAS DIAGNOSIS AND STABLE ON MEDICATION:**

Patients coming from overseas with a diagnosis made overseas (including Republic of Ireland) and stable on medication who wish NHS follow up can be referred to CMHT as above. The documents from the Private Provider must be sent with the referral. This includes diagnoses made by Clinical or Educational Psychologists.

No medication can be issued until CMHT have accepted the patient.

5. **NHS DIAGNOSIS (INCLUDING AFFILIATED SERVICES):**

Patients coming from elsewhere in the UK with a diagnosis of ADHD (made by the NHS or affiliated services such as 'Right to Choose') and who are stable on medication should be provided with NHS medication by the GP and referred to CMHT as above. Occasionally the GP may want to send the documents for approval before prescribing. GP to monitor as per Shared Care Agreement- weight, blood

pressure and pulse. There is no guidance for this but NICE recommends annually. There is no expectation to do a medication review.

CHILD ADHD Lothian Pathway Edinburgh

Based on guidance from the Scottish Government and the LMC this is to provide clarity for GPs and their patients about the current referral pathways and provision of medication for patients with ADHD currently in NHS Lothian

This Guidance is subject to change and last updated November 2024

1. **POSSIBLE ADHD DIAGNOSIS:**

Patients who wish referral to the Child & Adolescent Mental Health Services (CAMHS) to explore a diagnosis of ADHD can be referred by their GP if appropriate and would join the waiting list if the referral is accepted.

2. **PRIVATE DIAGNOSIS MADE IN UK AND NOT ON MEDICATION:**

Patients who have had a diagnosis after a Private Assessment (in the UK) and are **NOT** on medication but wish an NHS follow up or consideration of medication can be referred to CAHMS and would join the waiting list as above if accepted. The documents from the Private Provider must be sent with the referral. This includes diagnoses made by Clinical or Educational Psychologists.

3. **PRIVATE DIAGNOSIS MADE IN UK AND STABLE ON MEDICATION:**

Patients who have a diagnosis after a Private Assessment (in the UK) and are stable **ON** medication which has been started privately but wish ongoing NHS treatment and follow up can be referred to CAHMS as above. The documents from the Private Provider must be sent with the referral. This includes diagnoses made by Clinical or Educational Psychologists.

No medication can be issued until CAHMS have assessed the patient.

4. **OVERSEAS DIAGNOSIS AND STABLE ON MEDICATION:**

Patients coming from overseas with a diagnosis made overseas (including Republic of Ireland) and stable on medication who wish NHS follow up can be referred to CAHMS as above. The documents from the Private Provider must be sent with the referral.

This includes diagnoses made by Clinical or Educational Psychologists.

No medication can be issued until CAHMS have accepted the patient.

5. **NHS DIAGNOSIS (INCLUDING AFFILIATED SERVICES):**

Patients coming from elsewhere in the UK with a diagnosis of ADHD (made by the NHS or affiliated services such as 'Right to Choose') and who are stable on medication should be provided with NHS medication by the GP and referred to CAHMS as above. Occasionally the GP may want to send the documents for approval

before prescribing. GP to monitor as per Shared Care Agreement- weight, blood pressure and pulse. There is no guidance for this but NICE recommends annually. There is no expectation to do a medication review.
